RESEARCH USE ONLY | NOT FOR IN VITRO DIAGNOSTICS | NOT FDA APPROVED

Measles Panel A

Measles: RT-qPCR

Multiplex

All known strains of Measles

Optical Channels

FAM and ROX

Fast

Less than 60 minutes testing time

The Measles Panel A is an RT-qPCR assay designed for qualitative multiplex in vitro detection of *Morbillivirus hominis*, more commonly known as the measles virus. This assay has been specially formulated to detect the D8 genotype responsible for recent outbreaks in the United States but will also detect all known circulating strains.

Positive controls and internal controls are included at approximately 10,000 copies/µL.

Optimized Amplification reagents and Ready-2-test formats available!

Made in America

Targets	Optical Channels
Morbillivirus hominis	FAM
RNaseP	ROX

Sample:
Nasopharyngeal swab or sputum samples.

Compatibility:
Bio-Rad CFX96/384, Opus
Roche LightCycler 480 System
ABI QuantStudio 3, 5, 6, 7, 12, and 7500 series
Any instrument that detects FAM and ROX or similar channels
